

Intro to Nets Hackathon 2020 Quality Expectations v1.0

How to Submit

Please submit to the Moodle a link to your github repository (make sure it's not private). You can commit as much as you want, but only the last commit before the deadline will be considered.

Static Quality

- Code has proper layout, and meaningful function and variable names
- Code has comments and documentation for functions and major code blocks
- No hard-coded constants inside code, especially IP addresses or ports

Dynamic Quality

- Return values of functions are checked
- Exceptions are handled properly
- No busy-waiting
- Network code is isolated to a single network

Source control

- Code is hosted in a github repository
- Commits were made by all members of the team
- Proper use of commit messages and branches
